English is the language of today's society. It is impossible to get a good job without knowing him, go on a trip and communicate without him. This language is highly respected in every country. By studying it thoroughly, you will discover a new technological world for yourself and you will get a lot of interesting information in this world.

Great Britain and the United States of America: Between these two countries, language relations have been formed that are still incomprehensible to society. Disputes between them have been there for a long time. Each country tries to introduce innovations to this language from its own side. Noah Webster, who is well-known to the young generation of America, offered to study the version of the dictionary that he discovered.

There was a time when it was forbidden to speak this language. Such a law was passed in 1969 in the US state of Illinois. Their official language is recognized as American. At first glance, it seems that there is no difference between them, but in fact there are 24 dialects of the English language. This creates unprecedented difficulties for writers who are the authors of various works. Here, for example, is a book about the famous character Harry Potter. It had to be translated from English to American English so that the entire American population could easily read it.

A very interesting fact has been revealed! The most common letter in the dictionary is E, and the least common is Q.

Those who are directly familiar with the English language in America know very well that the same letters can be pronounced differently. It all depends on the speech and its intonation. One letter in a sentence can have several combinations of letters.

There was another letter in the interpretation of the Ingz language dictionary. This peculiar sign "&" is also found in words. Its presence did not change the meaning of the

word in the slightest, that's why today this letter has probably disappeared from the English language.

English words

Every Deryali language has words that differ in their pronunciation, spelling rules and sound. English is no exception. Let's look at some examples: the translation of the word "rhythms" is "rhythms". This word does not have a single vowel, making it the longest such word in the English language.

Indivisibility is unity. If you notice, the vowel letter (i) occurs 7 times in this word. This word is one of the simplest words in the English language.

The next word is set. This word, which seems tiny at first glance, has 44 different meanings for a verb, 17 different meanings for a noun, and 7 different meanings for an adjective. That's not all! There are many variants of the pronunciation of this word. The diversity of this word makes translation difficult, so it is necessary to pay close attention to the pronunciation of the word and the meaning of the whole sentence.

The longest word in the English language is Pneumonoultramicroscopicsilicovolcanoconiosis. It's hard to believe that this word is actually used in English. It is translated as a sentence meaning a disease and its name. Even in a simple dictionary there are mystical cases. From 1932 to 1940, the word ghost existed. It had no meaning, because it was added to the dictionary as a result of misunderstanding.

The history of the birth of the English language goes back to Germany with its roots. In the Middle Ages, the tribes of Germany invaded the land of Britain, which had once been taken over by the Romans, and during the communication a new incomprehensible language was born. Old English is different from modern English. For example: the translation of the word "bride" is "bride", and in the ancient language it meant the process of food preparation.

Since those times, many words have been changed, not only the sound and meaning of the words, but also the spelling. It is also known that there were no punctuation marks in this language until the 15th century.

Many lovers of English always emphasize the theory that this language is very popular because of its simplicity and everyday life. However, this theory deserves to be rejected. Just imagine - this language has more than 800 thousand words. Not only words, but also synonymous lines are very rich in their pronunciation. For example: the translation of the word "drunk" gives the meaning "intoxicated", this simple word has 2241 synonyms, which is a huge number. This record is even included in the Guinness Book of Records. You certainly won't find it in any other language.

The English language does not stand still, it is constantly being updated with new words. This is also very necessary to learn the language better.

Summary

Based on the above-mentioned facts, it can be concluded that this language will remain the crown of languages used by mankind for communication for many years (perhaps centuries). Learning it is the main goal of all students, students and ordinary people who are ready to develop.
