

THE SIGNIFICANCE AND VALUE OF LEARNING ENGLISH

Zubaydullayeva Zarina Erkinovna

Tashkent Academic Lyceum No.2 of the Ministry of Internal
Affairs of the Republic of Uzbekistan

Annotation: *Learning English provides individuals with the ability to communicate effectively in a variety of global contexts, from academia to professional settings. As the primary language of international business, science, technology, and diplomacy, it enables learners to engage with the vast amount of knowledge and resources available worldwide. In addition to its practical advantages, learning English fosters cultural exchange, allowing people to connect with others across borders. For many, proficiency in English represents a gateway to better job prospects, access to global markets, and participation in cross-cultural dialogues. This linguistic skill is increasingly regarded as essential for navigating the globalized world.*

Key Words: *English proficiency, Global communication, Lingua franca, Education, Career opportunities, International discourse, Cultural exchange*

Our primary means of communication is language. We are able to communicate our ideas and express ourselves through it. Because of this underlying universal truth, English is the primary language used for global communication. English has become the world's primary language due to its immense popularity. Even races who are not native English speakers use it as a second language. People are now studying it almost everywhere in the world because of how powerful it is. Globalization has an impact on almost everything in our society today, and one factor that does so is language. In non-English speaking countries, there is a push to learn English because communication is essential for understanding one another. Science, aviation, computers, diplomacy, and tourism all use English as their primary language. Understanding English improves your chances of landing a good position at a multinational corporation in your home country or in search of employment abroad. Learning English is essential for both socializing and entertainment, as well as for work, since it is the language of global communication, the media, and the internet.

The importance of learning English can be attributed to a few factors. English is the primary language used for international communication, so that is the first justification. The official language of 53 nations and the language of about 400 million people worldwide, English may not be the most spoken language in the world. English is the most widely used second language in the world, so speaking it is useful for more than just getting along with English speakers. The likelihood is that you will both be using English to communicate if you want to talk to someone from another country. More than two billion people worldwide will study English by 2025, according to the British Council. The ability to communicate with people from around the world is made possible by learning English.

MODERN EDUCATIONAL SYSTEM AND INNOVATIVE TEACHING SOLUTIONS

English is the business language, which is the second justification. Since English is the most widely used business language, knowing it has almost become a requirement for anyone who wants to work internationally. English is the language of choice for transnational business communication, according to research from around the globe, and many multinational corporations demand that their staff members speak it fluently. The value of learning English in the global economy cannot be overstated; it has the power to transform lives.

The third is that learning English opens up a world of entertainment to you. The best movies, books, and music in the world are frequently written, produced, and published in English. As a result, learning English will give you access to a wealth of entertainment and improve your understanding of other cultures. To enjoy your preferred books, songs, movies, and TV shows, all you need to do is speak English; you won't need subtitles or translations any longer. We encourage students to take part in the social program to practice English outside of the classroom environment because watching movies and television shows in the English language is also a fantastic and enjoyable way to learn it. Sports, art exhibits, museums, outings to nearby historic sites, and watching popular English movies are among the activities. The curriculum is created to encourage students to use and learn English in the context of British culture.

The final benefit is that you can access more of the Internet if you learn English. English is the language of the internet, according to a report by Education First. An estimated 565 million people use the internet daily, and 52 percent of the most popular websites are displayed in English. As you can access more than half of the online content by learning English, it is crucial to do so. Even though learning English can be difficult and time-consuming, we can see that it is also very valuable to learn and can open up many opportunities.

English as a second language is something that more and more people are investing time in these days. Children are beginning to learn English at younger and younger ages in many countries where it is part of the curriculum in schools. What is the real benefit of learning English, though? Learning English can advance your life both personally and professionally, whether you're looking for a new job or intend to travel the world. You can compete on the international job market, advance your career, and begin to network internationally.
