

A METHOD FOR CREATING ONLINE QUIZZES FOR STUDENTS' EXTRACURRICULAR ACTIVITIES

Kulmurodov Islombek Elmurot ugli

Secondary School No. 1 in Samarkand, Uzbekistan

Today, the digitalization of the educational process requires organizing students' educational activities not only during lessons but also outside of them based on modern technologies [1]. In addition to traditional classes, the use of digital educational tools is of great importance for the meaningful organization of students' leisure time, orientation toward independent learning, and reinforcement of acquired knowledge.

Extracurricular educational activities create conditions for students to acquire knowledge based on their interests, needs, and individual capabilities. In such activities, the student does not limit themselves to performing tasks assigned by the teacher, but independently searches for information, answers questions, tests their knowledge, and evaluates the results.

From this perspective, online quizzes are considered one of the effective tools for organizing extracurricular education. Quizzes allow learners to test their knowledge in a fun, interactive, and competitive way.[2] Therefore, online quizzes on informatics and information technology were developed for students' extracurricular activities. To develop online quizzes, the <https://ahaslides.com> platform is used. To use this platform, it is required to sign up via a Google account.

Figure 2. The process of using online quizzes

To organize online quizzes on computer science and information technology topics, the teacher can conduct various quizzes by creating a personal cabinet in the <https://presenter.ahaslides.com> environment. Furthermore, this process further develops students' skills in using information and communication technologies.

Questions and assignments created on the <https://ahaslides.com> platform in the subject of Informatics and Information Technology help increase students' interest in the subject and deepen their understanding of the topic through logical thinking. The platform also stores the results of teachers and students.

In conclusion, the use of online quizzes in organizing students' extracurricular activities allows for an increase in the interactivity and efficiency of the educational process. In addition to being a means of monitoring students' knowledge, they serve to develop independent learning, logical thinking, rapid decision-making, self-assessment, and digital competencies.
