Аннотация: В данной статье рассматривается концепция коммуникативных навыков и подчёркивается их значимость в современном образовании. Обсуждаются теоретические подходы, проводится обзор существующей литературы, а также анализируется вклад коммуникативной компетенции в академическую успешность обучающихся и их социальное развитие.

Ключевые слова: коммуникативные навыки, коммуникативная компетенция, современное образование, обучение языкам, межличностные навыки, цифровая коммуникация, гибкие навыки.

Introduction

In the 21st century, education has shifted from knowledge transmission to the development of essential life skills. Among these, communicative skills play a central role in shaping learners' academic, professional, and social success. Communicative skills refer to the ability to convey ideas effectively, understand others, and engage in meaningful interactions across different contexts.

Modern education systems emphasize not only subject knowledge but also the ability to collaborate, negotiate, and express thoughts clearly. With globalization and the rapid growth of digital technologies, communication has become more complex and multidimensional, making communicative competence a key objective in educational frameworks worldwide.

Literature Review

The concept of communicative skills has been widely discussed in educational and linguistic research. According to Dell Hymes, communicative competence goes beyond grammatical knowledge and includes the ability to use language appropriately in social contexts. Later, Canale and Swain expanded this model by introducing components such as grammatical, sociolinguistic, discourse, and strategic competence.

Research in applied linguistics emphasizes that communicative skills are essential for language acquisition. The Communicative Language Teaching (CLT) approach, for

MODERN PROBLEMS IN EDUCATION AND THEIR SCIENTIFIC SOLUTIONS

example, focuses on interaction as both the means and the goal of learning. Scholars such as Vygotsky highlight the social nature of learning, suggesting that communication is fundamental for cognitive development.

Recent studies also underline the importance of digital communication skills, including online collaboration, media literacy, and virtual interaction. These skills are increasingly relevant in modern classrooms where technology is integrated into teaching and learning processes.

Results and Discussion

The analysis of current educational practices shows that communicative skills significantly influence students' academic performance and personal development. Learners who possess strong communication abilities are more confident in expressing their ideas, participating in discussions, and engaging in collaborative tasks.

In modern education, communicative skills contribute to:

- **Effective learning:** Students understand and retain information better through discussion and interaction.
- **Critical thinking:** Communication encourages questioning, reasoning, and problem-solving.
- **Social integration:** Learners develop empathy, respect, and cultural awareness.
- **Career readiness:** Employers highly value communication as a key soft skill.

Furthermore, the integration of technology has transformed communication patterns. Students now communicate through digital platforms, requiring new competencies such as clarity in written communication, online etiquette, and the ability to interpret multimedia content.

However, challenges remain. Some educational systems still prioritize rote learning over interaction, limiting opportunities for students to develop communicative competence. Teachers play a crucial role in creating interactive environments, using methods such as group work, debates, presentations, and project-based learning.

Conclusion

Communicative skills are a fundamental component of modern education.

They enable learners to succeed academically, interact effectively in diverse environments, and adapt to the demands of the globalized world. Educational institutions must prioritize the development of these skills by adopting interactive teaching approaches and integrating communication-focused activities into curricula.

In conclusion, fostering communicative competence is not only an educational goal but also a necessity for preparing individuals to thrive in the 21st century.
