*3rd course 23-01 group*

### **Introduction**

Creativity is one of the most essential skills children need in the 21st century. In a world shaped by rapid technological growth, children must learn not only to absorb information but to transform it into novel ideas and practical solutions. While many educators focus on traditional creative activities such as drawing or singing, today's children require tasks that push their imagination far beyond conventional boundaries. This article explores innovative, less-common, and highly engaging creative tasks that empower children to think critically, communicate effectively, and develop lifelong problem-solving abilities.

#### **1. Sensory-Driven Creativity Tasks**

Most creative activities rely heavily on visual input. However, children's imagination becomes much stronger when multiple senses are activated simultaneously. Sensory-based tasks help children build meaning from textures, sounds, smells, and movements.

##### **1.1 Sound-Mapping Stories**

Children listen to short sound clips—such as footsteps on gravel, a closing door, or distant laughter—and then create a story based only on those sounds.

##### **1.2 Texture-Based Art Challenges**

Instead of colored pencils, children receive items like cotton, sandpaper, foil, fabric, or rice to create an artwork using tactile materials.

#### **2. Reverse-Engineering Creativity**

Traditional creative tasks ask children to make something new. Reverse-engineering tasks make them imagine how something works by breaking it down.

##### **2.1 “Take It Apart” Stations**

Children safely explore old clocks, remote controls, or toys to examine internal parts and then redesign them.

##### **2.2 Backward Story Construction**

Children start from the last line and build the story backward.

#### **3. Real-World Innovation Tasks**

##### **3.1 Micro-Problem Solving Projects**

Children identify small real problems and design simple prototypes.

### 3.2 ‘Future Job Simulator’

Children invent new jobs that do not exist today such as Cloud Sculptor or Emotion Architect.

### 4. Collaborative Creativity Tasks

#### 4.1 The Silent Construction Challenge

Children build something in groups without speaking.

#### 4.2 Community Story Web

Each child writes a paragraph, passing the story throughout the group.

### 5. Digital and Technological Creativity

#### 5.1 AI-Inspired Art Prompts

Children describe imaginary objects and use AI-generated images to build stories.

#### 5.2 Code-Free Game Design

Children design games using drag-and-drop tools.

### Conclusion

Creative tasks for children should extend beyond traditional crafts. Modern learners need multi-sensory experiences, teamwork challenges, and digital creativity tasks. These activities prepare them to become confident thinkers and innovative problem-solvers ready for the future.
