

THE INTERRELATIONSHIP BETWEEN ABILITY AND ORATORY

Bobokhodjaev Rashidjon Khashimovich

PhD in Philology, Associate Professor,

Head of the “Editorial Publishing and Printing” Department,

Tashkent State Transport University

Annotation: *This article explores the relationship between ability and oratory from both scientific and social perspectives. Ability is defined as a decisive factor in a person's intellectual and social development, while oratory is presented as its practical expression and a powerful tool of communication. The paper offers a detailed analysis of the significance of both traits in society through historical examples, scientific advancements, and leadership practices.*

Keywords: *Ability, oratory, leadership, social development, knowledge, influence, intellect, globalization.*

Ability and oratory are among the most essential factors for a person's success in life, establishing a meaningful position in society, and influencing others. These two qualities are deeply interconnected, complementing and reinforcing each other. While ability enables a person to achieve mastery in a specific field, oratory allows them to convey their ideas and knowledge to a wider audience.

Ability refers to a person's natural aptitude for quickly acquiring knowledge and skills and applying them effectively in practice. It plays a crucial role in one's professional success. In psychology, ability is classified into general (such as intellectual capacity and cognitive speed) and special abilities (linked to specific fields). Talented individuals significantly contribute to social progress, scientific discoveries, reforms, and the realization of new ideas.

Oratory is the capacity to speak eloquently, express thoughts clearly, and persuade others. It reflects one's intellect, knowledge, and life experience. For public speakers, leaders, or socially active individuals, oratory is a vital skill. This skill involves more than language proficiency—it also requires psychological sensitivity and the ability to connect with an audience.

Ability is a remarkable human asset shaped through thousands of years of evolutionary development. It manifests in science, leadership, the economy,

politics, arts, and literature. All material and spiritual achievements of humanity are, in fact, the grand expressions of human capability. In this sense, ability can also be considered the product of exceptional minds in the processes of social production, including leaders, scientists, artists, and thinkers who shape the cultural, spiritual, material, and technical foundations of society.

Such capable individuals discover the laws of nature and society, from which humanity at large benefits. These societal breakthroughs, in turn, create favorable conditions for the emergence of more talented professionals, thus laying a strong foundation for continuous societal development.

A closer analysis of the lives of great leaders and geniuses reveals that their success was largely driven by qualities such as strong determination, organizational and leadership skills, and unwavering commitment to their goals. The past three centuries, in particular, stand out for producing many such professional leaders and scholars, making this era distinct from others in terms of transformative change and innovation.

The 20th century, for instance, witnessed great creativity and revolutionary progress. It was during this century that mass literacy was achieved, radio and television were invented, space exploration began, and computers and information technologies emerged. All these advancements are the result of extraordinary human ability.

Throughout history, humanity has strived to conquer nature, understand its mysteries, ease labor processes, and enhance both material and cultural living standards. Every era has required the strength, versatility, breadth, and intellect of exceptionally talented leaders. This need remains vital in the present and will continue into the future, as humanity faces new economic, social, and political challenges.

In this context, our President has emphasized that the only way to overcome economic hardship and ensure sustainable development is by nurturing talented youth, promoting science, and creating new technologies. He has called on every leader, citizen, and intellectual to master a modern system of governance that meets the demands of high-level progress.

History is filled with examples of great leaders and scholars who were not only capable but also eloquent speakers. Figures such as Abulqosim Firdavsi, Ibn Sina (Avicenna), Abu Nasr Farobi, and Aburayhon Beruni effectively used oratory skills to communicate their philosophical and scientific ideas to the public.

Strong leadership is inherently linked to the combined presence of ability and oratory. Individuals like Islam Karimov, Winston Churchill, Franklin Roosevelt, Julius Caesar, and Mustafa Kemal Atatürk inspired their people and led societal transformations through their oratory prowess.

Leadership is a complex social phenomenon in which both ability and oratory play significant roles. A competent leader is knowledgeable in their field and quick to understand and resolve issues. However, this alone is not enough. Such a leader must also possess oratory skills to convince, inspire, and motivate their team. Oratory fosters positive psychological climates and mutual trust within groups.

The 21st century is an era of rapid communication and information technologies, increasing the demand for both ability and oratory. Today's leaders, scientists, and public figures must not only be knowledgeable but also persuasive communicators. Success favors those who can capture attention in the information flow, speak clearly, and deliver impactful messages.

During the years of independence, Uzbekistan has implemented numerous state programs to support talented youth and foster their intellectual and moral development. Under the leadership of President Shavkat Mirziyoyev, particular attention has been paid to education. Based on the principle of "New Uzbekistan – New Opportunities," each sector is seeing the emergence of highly capable and articulate professionals.

Conclusion: Ability and oratory are the solid foundations of human progress. These two qualities are interrelated and play a crucial role in personal growth, societal influence, and the implementation of scientific and social innovations. In the modern world, individuals who possess both high-level abilities and strong oratory skills can secure prominent roles not only in their professional fields but also on a global scale.
